Protecting technology on the go to keep the public transport system on the right track

THE CHALLENGE:

Qbuzz (<https://www.qbuzz.nl/english>) is an ambitious and innovative quality player in the Dutch regional mobility market that aims to put public funds to work in the most effective and sustainable way possible. The company works with public transport authorities to uncover the best ways to provide mobility services that meet municipal and social needs. Qbuzz provides users with a truly door-to-door service; with journey planners, advice on mobility services and costs, and constant information and assistance en route.

Qbuzz drivers use tablets throughout their working day to streamline their daily tasks while providing real-time information and thus ensuring safety. These tablets are constantly being used and can be exposed to knocks and bumps, vibration or dust and other atmospheric factors. As part of the company's commitment to providing top quality, efficient urban and regional public transport, these valuable working tools need to be protected.

THE SOLUTION:

The rugged OtterBox Defender Series for the Samsung Galaxy Tab A was chosen to provide optimum protection for this busy fleet. Approximately 1,200 drivers now use their tablets safe in the knowledge that the OtterBox Defender will protect their devices against drops and shocks, while port covers keep dust and debris at bay. A three-layer, drop-proof case and integrated screen protector complete the all-round defence system.

To date, none of the tablets have been damaged in any way, proving that the OtterBox Defender Series provides unbeatable protection. OtterBox Certified Drop+ Protection means the case has undergone rigorous testing, with more than 24 separate tests collectively lasting over 238 hours, to ensure that this rugged, minimal profile case performs when it matters most.

Designed for real life, its multi-layer construction, built-in screen protector and versatile shield stand – created to feature a natural typing angle and support portrait and landscape viewing modes – provide ultra-durability for hardworking teams.
